

PulseEV Proposal

Enterprise EV Fleet Lifecycle Intelligence & Compliance

CONFIDENTIAL BRIEFING FOR CEO & CBO • PULSEEV OPERATIONS

Mohammed Ismail

The Core Problem: Legacy EV Lifecycle Chaos

- **Compliance & RTO Penalties**

Delivered vehicles operating without active plates cause severe transport regulatory auditing risks, fines, and operational delays.

- **Safety & Recall Exposure**

Conducting battery campaign swaps without rigid serial-number matching voids manufacturer warranties and exposes the firm to liability.

- **Operational Maintenance Gaps**

Manual scheduling systems miss critical milestone checks (1K, 5K, 10K, 20K km) because they fail to track real-time odometer readings.

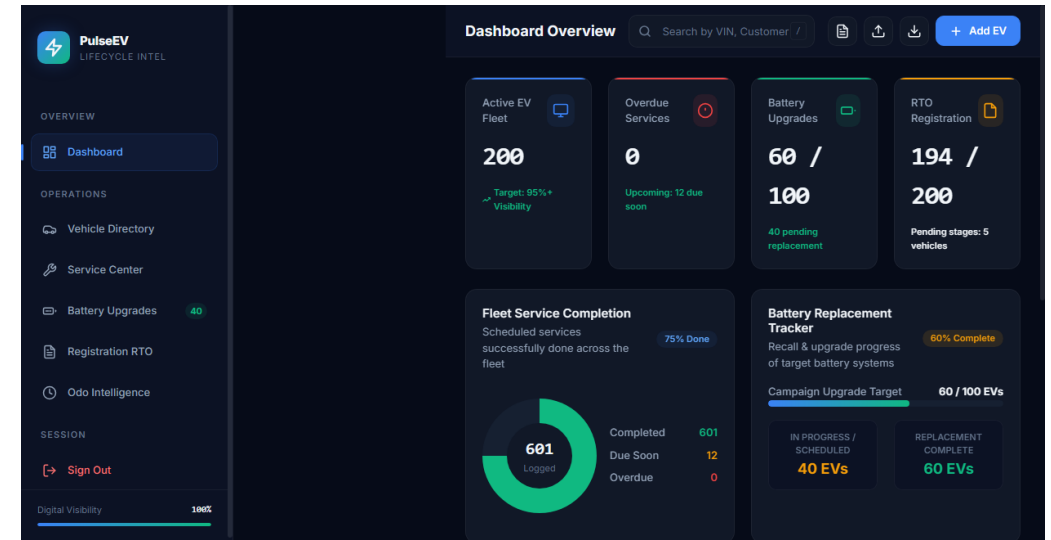

The Solution: PulseEV Central Portal

- **Unified Source of Truth**

Consolidates odometer mileage history, scheduled service packages, recall campaigns, and plate registrations in a single, central database.

- **Strict Validation Rules**

Enforces typo-safe dropdown parameters (models, statuses, booleans) to maintain data hygiene and verify matching serial numbers.

Measurable Business Impact & ROI

- **0% Compliance Delays**

Automating document staging and plate logging speeds up the registry pipeline, getting vehicles on the road faster.

- **100% Serialization Audits**

Logs and matches retired vs. replacement battery pack serial numbers, preserving thousands of dollars in warranty assets.

- **Active Odometer Analytics**

Predicts service schedules based on daily driving trends, closing service backlogs and expanding vehicle longevity.

Role-Based Workspaces for Your Teams

- **Fleet Directors Dashboard**

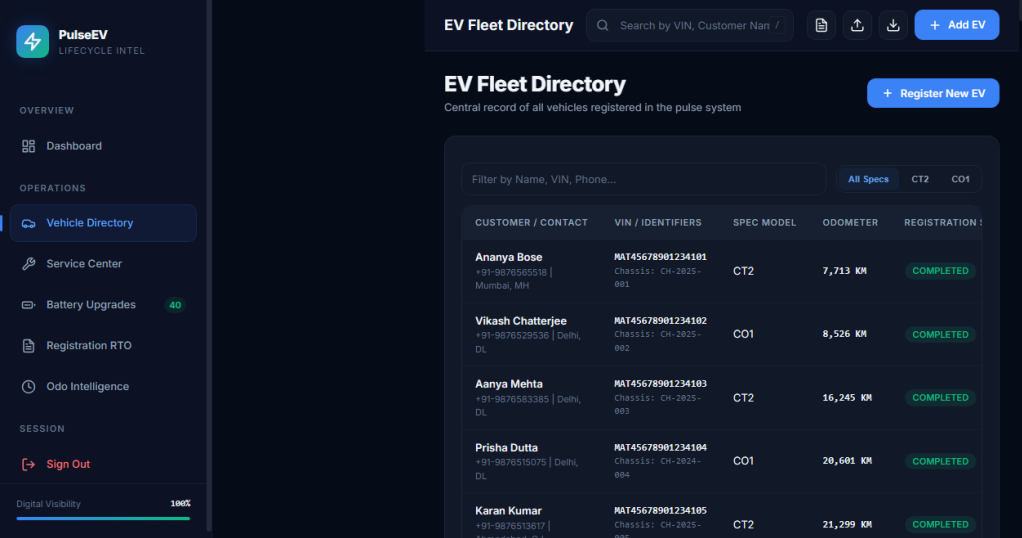

Access high-level visual charts, progress metrics, and recall campaign completion rates in real-time.

- **Support Ops Smart Search**

Audit specific vehicles instantly via a global '/' hotkey search querying VIN, customer name, or phone number.

- **Field Service Technicians Form**

Simple dialog boxes to input completed services, log odometer readings, and report battery swaps.

CUSTOMER / CONTACT	VIN / IDENTIFIERS	SPEC MODEL	ODOMETER	REGISTRATION :
Ananya Bose +91-9876565518 Mumbai, MH	MAT45678901234101 Chassis: CH-2025- 001	CT2	7,713 KM	COMPLETED
Vikash Chatterjee +91-9876529536 Delhi, DL	MAT45678901234102 Chassis: CH-2025- 002	CO1	8,526 KM	COMPLETED
Aanya Mehta +91-9876583385 Delhi, DL	MAT45678901234103 Chassis: CH-2025- 003	CT2	16,245 KM	COMPLETED
Prisha Dutta +91-9876515075 Delhi, DL	MAT45678901234104 Chassis: CH-2024- 004	CO1	28,601 KM	COMPLETED
Karan Kumar +91-9876513617 Chennai, TN	MAT45678901234105 Chassis: CH-2025- 005	CT2	21,299 KM	COMPLETED

Built to Scale: Bulk Excel/CSV Operations

- **Validating Spreadsheet Templates**

Includes instructions, required columns, and data dictionary guidelines to ensure accurate data entry.

- **Input Validation Warnings**

Restricts parameters like model names (CT2/CO1) to prevent database entry typos.

- **Zero-Friction In-Browser Upload**

Processes .xlsx and .csv files: matches and updates mileage for existing VINs, and registers new vehicle profiles.

Enterprise-Grade Architecture

- **FastAPI Backend Framework**

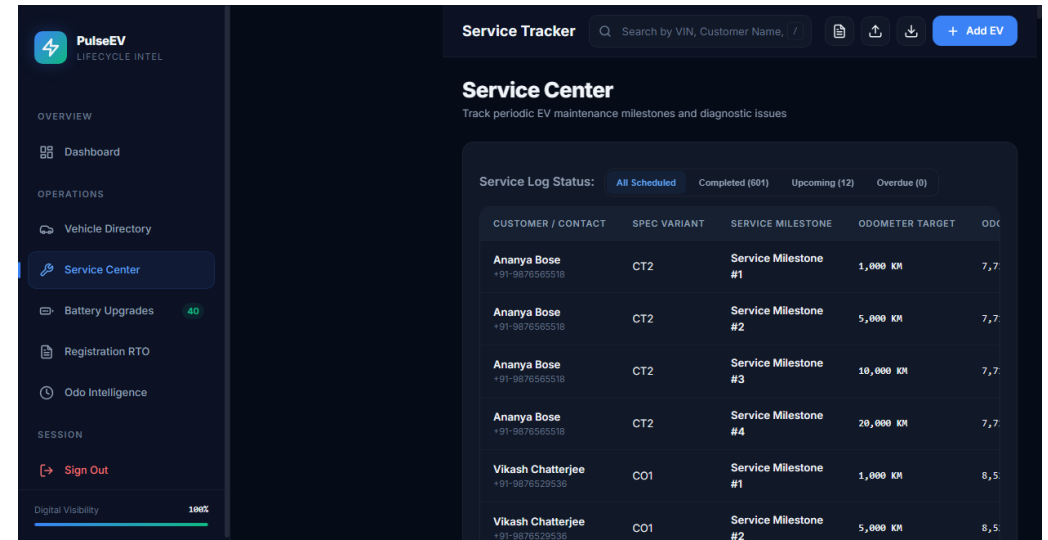

High-performance Python API server with secure JWT authentication, bcrypt encryption, and SQLAlchemy ORM.

- **Vanilla JavaScript SPA Frontend**

Clean, bundle-free client design. Uses local caching to support offline access and local backups.

- **Flexible Multi-DB Integrations**

Supports local SQLite databases for developer testing and Neon PostgreSQL for production environments.

Proof of Concept: 200-Vehicle Demo

- **Seeded Evaluation Fleet**

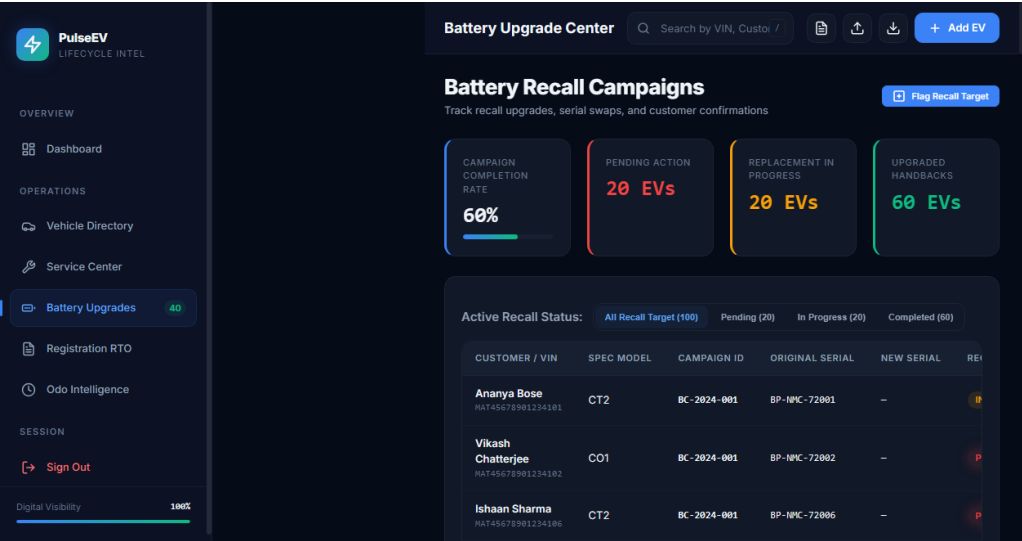

Features 200 pre-seeded customer records to demonstrate system responsiveness and database performance under scale.

- **Service Center & Technician Assignments**

Audits odometer logs, completed km milestones, and technician assignments.

- **Recall Campaigns Tracker**

Tracks retired battery serials, replacement status, and signed customer sign-offs.

Let's Drive Your EV Operations Forward

We are ready to schedule a 15-minute operational briefing or deploy a live Proof of Concept (PoC) using your templates.
